Allan Rae Saac

DevSecOps | IT Risk & Cybersecurity | CISSP & CRISC | Cloud
Security | IAM | Bridging Security, Risk & Engineering
Puerto Princesa, Mimaropa, Philippines

Summary

I am an IT Risk and Cybersecurity professional with over 10 years of experience in IT and 5+ years specializing in IAM, security governance, and enterprise risk. My background has largely focused on bridging security, compliance, and operational realities across enterprise environments — particularly in areas such as:

- Identity & Access Management (IAM)
- Vulnerability Management
- IT Risk & GRC
- Security control implementation
- Compliance and governance support

Recently, I've been transitioning deeper into DevOps and cloud-focused environments to better understand how security can be embedded directly into systems, pipelines, and engineering workflows. I'm particularly interested in:

- DevSecOps and RiskOps
- Cloud Security Architecture
- Security automation
- CI/CD security integration
- Risk-aware engineering practices

My long-term goal is to help design secure, scalable, and practical cloud-native systems where security becomes part of the architecture — not just an afterthought.

Certifications: CISSP | CRISC | Security+ | AWS Cloud Practitioner | Azure Fundamentals | ITIL 4

I enjoy learning, building, and sharing insights at the intersection of security, risk, and engineering.

Experience

ING

IT Risk Ops Engineer

September 2023 - Present (2 years 9 months)

- Led execution and continuous improvement of IT risk controls, SOx compliance activities, and security operations across multiple enterprise domains, including IAM, Vulnerability Management, Security Monitoring, and Change Management.
- Managed end-to-end control execution and audit readiness for critical applications, driving high-quality evidence validation, remediation follow-through, and improved audit outcomes.

- Drove Vulnerability Management initiatives by coordinating remediation activities, validating security findings, prioritizing risk treatment, and collaborating with security and DevOps teams on SAST, SCA, DAST, and infrastructure-related issues.
- Participated in penetration testing, Secure SDLC, and security governance improvement initiatives, helping strengthen security integration into development and operational workflows.
- Designed and enhanced security analytics automation and monitoring processes, reducing manual operational effort and improving visibility into anomalous activities and control effectiveness.
- Contributed to cross-functional initiatives involving IT Resilience, privileged access governance, lifecycle management, and security process improvements across enterprise environments.

Palawan Pawnshop

15 years 9 months

Information Security - User Access Mgmt Section Head

July 2021 - July 2023 (2 years 1 month)

Palawan

- Led an IAM team supporting 15,000+ employees and 6,000+ external partners, managing end-to-end identity lifecycle processes across Active Directory, Azure AD, SAP SuccessFactors, Keycloak, and internally developed platforms.
- Strengthened enterprise access governance by implementing role-based access control (RBAC), least privilege principles, and access matrix standardization, improving both security posture and operational efficiency.
- Served as a key contributor to regulatory and audit readiness initiatives, preparing and validating security control evidence to support BSP compliance and internal governance requirements.
- Collaborated with business and technical teams to integrate HRIS and Active Directory workflows, improving provisioning accuracy, automation, and identity management process efficiency.
- Supported operational resilience and knowledge continuity through team mentoring, process documentation, and delivery of IAM-related training and procedural guidance.
- Participated in Change Advisory Board (CAB) activities to help align infrastructure and application changes with security, compliance, and operational governance standards.

System Administration Team Leader

January 2018 - June 2021 (3 years 6 months)

Palawan

- Led a cross-functional infrastructure operations team composed of System Administrators, Database Administrators, and Data Center Operators, ensuring operational stability, service continuity, and adherence to documented operational standards.
- Managed and coordinated multiple IT initiatives and operational projects in collaboration with internal stakeholders and third-party vendors, including Online Payment Portal, Helpdesk System, Data Analytics initiatives, and MySQL-based reporting solutions.
- Designed and implemented segregation of development, testing, acceptance, and production server environments in partnership with Application Support teams, improving change management practices, operational governance, and security posture.
- Strengthened operational compliance through the implementation and enforcement of standardized procedures, documentation practices, and infrastructure governance controls aligned with organizational and regulatory requirements.

System And Database Administrator

January 2014 - December 2017 (4 years)

Palawan

- Managed and maintained enterprise infrastructure and internally developed systems, supporting operational stability, issue resolution, and continuous service availability across distributed business operations.
- Coordinated deployment and operational support of core business applications, including remittance, pawning, and money-changing systems, across nationwide branch environments.
- Collaborated with cross-functional technical and business teams to implement system improvements and operational enhancements that streamlined workflows and improved service efficiency.
- Investigated and resolved infrastructure and application-related incidents, contributing to reduced downtime and improved system reliability across operational environments.

IT Data Center Operations Supervisor

January 2011 - December 2013 (3 years)

Palawan

- Supervised data center operations across four geographically distributed locations, helping maintain operational continuity, infrastructure stability, and high service availability.

- Coordinated operational processes and incident response activities to support uninterrupted delivery of business-critical IT services.
- Improved operational efficiency and service reliability through process standardization, proactive monitoring, and infrastructure support coordination.

Information Technology Lead Engineer

January 2009 - December 2010 (2 years)

Iloilo

- Led on-site deployment, maintenance, and support activities for branch IT systems, improving operational responsiveness and infrastructure reliability across assigned locations.
- Reduced operational disruptions through proactive troubleshooting, preventive maintenance, and timely resolution of infrastructure and system issues.
- Coordinated system upgrade and rollout initiatives, supporting smooth implementation and minimizing operational downtime during deployment activities.

Information Technology Field Engineer

November 2007 - December 2008 (1 year 2 months)

Aklan, Western Visayas, Philippines

- Performed installation, maintenance, and technical support for branch IT infrastructure and end-user systems across multiple operational sites.
- Supported network troubleshooting and infrastructure issue resolution to improve system stability and operational continuity.
- Assisted in maintaining reliable day-to-day IT operations through field support, preventive maintenance, and technical coordination activities.

Education

STI College Puerto Princesa
